

Student guide

Test the connection. Find what could stop it and who could enforce the promise.

No previous reading is required. Core facts, source summaries and definitions are included. Originals and deeper reading open online.

Begin and investigate

• Your role is investigator. Assess a proposed connection between Gaza and the West Bank; build a case about its rules, evidence and unresolved conditions.

• Follow encounters 1–8 for the full route, or use the map to revisit a question. The current task says what to do. Show this step takes you to the relevant control without choosing an answer.

• Inspecting a dated record examines history. Selecting Assume yes, Assume no or Not established creates an explicit hypothetical input. Read the result and what it leaves open.

• Save the finding using the scene’s Save button. Moving to the next encounter only changes location; it does not save an unfinished finding. An evidence-supported uncertainty can be saved.

• The pressure lab has four panels: compare three access profiles; test a closure scenario and the response duty; change one condition, predict and explain; then save a response. Revisit any panel using its numbered button.

• The evidence board shows your saved findings first. Show all steps opens intermediate choices and tests. Earlier predictions and revisions remain in your record.

• For class, the full route has eight findings and a short reflection of about 50 words. Download the readable report and submit it through your course. A shorter route stays marked as a draft. Just for learning keeps writing optional and closes with a short findings receipt.

Keep your work

My work → Reflection

Writing saves on the current device when browser storage is available. Sources can stay pinned beside the reflection. Optional private notes are included in an export.

My work → Case record

Use Download readable report for a TXT report, Print / save PDF for the browser print dialogue, or Save progress file for a JSON recovery file. The report retains original choices, revisions, completion status, source references and the reflection.

My work → Save and recover

Use Save progress file before leaving or changing devices. Resume from a file accepts the same case's JSON save or its marked progress-text recovery copy. Copy progress text is the fallback when downloads are blocked. A readable TXT report is not a resumable save.

Evidence board

The board first shows saved findings. Show all steps opens intermediate records; no earlier work is deleted. An optional working explanation saves as typed. Keep an explanation snapshot preserves a deliberate version with its evidence groups.

A short reflection

In about 50 words: what is your strongest finding about the arrangement? Name the evidence and one unresolved condition that matters.

About 50 words is guidance, not an exact count. A partial route remains an incomplete record. Submit the readable TXT report or a PDF through your course, following its instructions; nothing is sent automatically.

Read and move comfortably

Options offers Larger text, Reduce animation and labels/list controls beside maps. Every consequential action has a button or list alternative; no precise dragging, audio or speed score is required. Tap, hover or keyboard-focus an underlined term for its definition. How to assess it and Need a lead? open included facts, an evaluation method, a limit and a next-evidence question.

Optional accounts of death are non-graphic and may be skipped. Offer a pause, extra time or the source-based alternative. Assess the reasoning, not distress, emotional intensity, identity or a learner's political position.

Check a claim or go deeper

Further reading

External sources need internet. Browser saves stay with the current browser and address. Use a progress file to move between website and downloaded editions. The Complete ZIP includes offline guides, photos, credits and the game.
